BTC TREASURY DESK

The Bitcoin Treasury Cheat Sheet

How Strategy (MSTR) and Strive (ASST) turn capital into bitcoin, plus the preferreds, metrics and filings to watch.

DATA AS OF OCT 12, 2026

STRATEGY BTC HELD	STRATEGY AVG COST	STRIVE BTC HELD	STRATEGY USD RESERVE
848,250	**$75,444** /BTC	**35,595**	**$5.02B**
as of Oct 11 (8-K Oct 12)	$64.00B total, incl. fees	8-K filed Oct 14, 2026	for dividends & interest, Sep 27[1]

1 How Strategy raises money to buy bitcoin

THE FLYWHEEL

1 · RAISE CAPITAL

- **Common equity (ATM)** — New MSTR shares sold into the market. Dilutes holders; adds no fixed payments
- **Convertible notes** — Debt that can convert into MSTR. ≈$6.75B principal, Jun 30, 2026 [3]
- **Perpetual preferred stock** — STRF · STRC · STRK · STRD + STRE (euro). Pays dividends, no maturity

Preferreds and notes create claims that rank ahead of MSTR common stock. [3]

2 · CONVERT TO BTC

STRATEGY
Cash proceeds, net of fees
buys bitcoin on the market

3 · HOLD

BITCOIN RESERVE
848,250 BTC
Bought for $64.00B · avg $75,444/BTC
incl. fees · as of Oct 11, 2026
Goal: grow BTC per share over time

USD RESERVE
$5.02B
Sep 27, 2026 [1]

Pays the fixed obligations
Preferred dividends + interest on debt
Q2 2026 cash preferred dividends: $400.2M [3]

Real week, from the Sep 28, 2026 8-K: Strategy sold 1,469,165 MSTR shares through its ATM for **$246.2M** net. **$142.7M** bought 1,665 BTC (avg $85,681) and **$103.5M** went to repurchasing STRC. No preferreds were sold that week.[1]

2 The preferreds at a glance

STATED TERMS · NOT YIELDS

TICKER	ISSUER	STATED RATE*	PAYS	LIQ. PREF.	CUMUL.	KEY FEATURE
STRF Strife	Strategy	**10.00%** Fixed	Quarterly	$100 stated†	Yes	Most senior Strategy preferred; cash dividends; board rights if unpaid.
STRC Stretch	Strategy	**12.00%** CHECK CURRENT RATE Variable	Semi-monthly (daily proposed)	$100 stated†	Yes	Rate reset by Strategy; aims for trading near $100. Redeemable at $101.
STRK Strike	Strategy	**8.00%** Fixed	Quarterly	$100 initial†	Yes	Converts to 0.1 MSTR share; dividend in cash, MSTR stock, or both.
STRD Stride	Strategy	**10.00%** Fixed	Quarterly	$100 stated†	No	Non-cumulative: a skipped dividend is never owed. Most junior preferred.
SATA Strive pref.	Strive	**13.00%** CHECK CURRENT RATE Variable	Monthly rate; Oct 2026 paid each business day	$100 stated†	Yes	Strive targets $99–$101 trading; unpaid dividends compound monthly.

* Annual rate on the $100 stated amount, not the yield at today's market price. STRC 12.00% applies to semi-monthly periods starting on/after Oct 16, 2026 (8-K filed Oct 1, 2026)[2]; a stockholder vote on daily record dates is set for Oct 28, 2026. SATA 13.00% applies to Oct 1–31, 2026, paid at $0.0516 per business day (8-K filed Sep 15, 2026)[5]. STRF/STRK/STRD: Strategy 10-Q, Jun 30, 2026[3]; SATA terms: Strive 10-Q[6]. Also: **STRE** (Stream), a 10% euro-denominated preferred on the Luxembourg Stock Exchange. † Liquidation preference generally the greater of $100 (€100 for STRE) or a recent trading price. STRK has no stated amount; its liquidation preference started at $100.

STRIVE (ASST) · SEP 25, 2026[4]

27,462 BTC · **100,776,795** assumed fully diluted shares · **12,193,180** SATA shares outstanding · also holds **505,000** shares of Strategy's STRC

RULE OF THUMB

Common stock sales add **shares**. Preferred and note sales add **fixed obligations**. Bitcoin bought with either is only a win for common holders if **BTC per share** rises.

3 Key metrics in one line each

STRATEGY'S OWN KPIS · NOT GAAP

BTC per share

How much bitcoin backs each share, counting likely future shares.

`BTC held ÷ assumed diluted shares`

847,666 ÷ 451.577M ≈ 0.00188 BTC

Sats per share

Same idea in satoshis. 1 BTC = 100,000,000 sats.

`BTC per share × 100,000,000`

≈ 187,713 sats per share (derived)

BTC Yield

% change in BTC per share over a period. It can be negative.

`(BPS end ÷ BPS start) − 1`

YTD at Sep 28, 2026 report: (3.7%)

BTC Gain

BTC Yield restated as a number of bitcoin.

`BTC held at start × BTC Yield`

YTD: (25,085) BTC, per the ledger

mNAV

What the market pays for the company relative to its bitcoin.

`Enterprise value ÷ Bitcoin NAV`

EV = common mkt cap + debt + pref. notional − cash

Bitcoin NAV

The dollar value of the bitcoin pile. Ignores debt and preferreds.

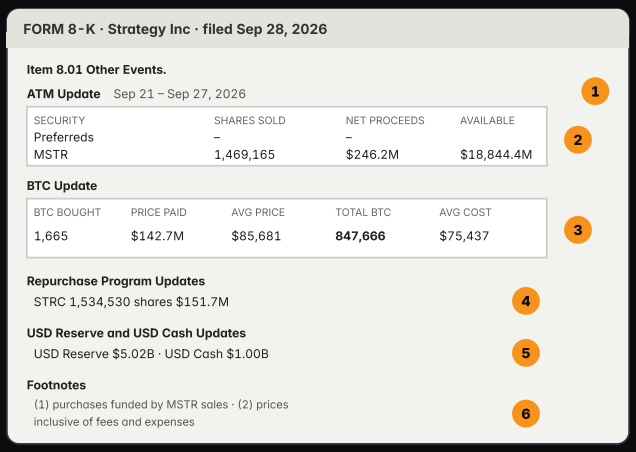

`BTC held × BTC price`

>1× mNAV = premium · <1× = discount

Worked examples use Strategy's 847,666 BTC and 451,577,000 assumed diluted shares from the ledger row reported Sep 28, 2026[1,8]. Definitions per Strategy's 10-Q[3] and press materials[7]. Strive reports "Assumed Fully Diluted Shares" on its own basis[4]; don't compare the two without reading both definitions.

4 How to read a Strategy 8-K purchase announcement

REAL EXAMPLE · SEP 28, 2026

1. **Period.** The week covered. Weekly updates have recently been filed on Monday (Tuesday after a holiday).
2. **ATM table.** What was sold and the net cash raised. Common sales dilute; preferred sales add dividend obligations.
3. **BTC update.** Bitcoin bought that week, the price paid, and the new running total and average cost.
4. **Repurchases.** Buybacks of MSTR or preferreds. Money spent here did not buy bitcoin.
5. **Reserves.** USD Reserve (for dividends and interest) and USD Cash balances.
6. **Footnotes.** Where the money came from and how prices are measured. Read these every time.

The quick check: new total BTC − last week's total = BTC bought (or sold). Then ask: was it funded by common (dilution) or preferreds (new dividends)? Compare the average price paid with the running average cost.

5 Key risks

READ THE RISK FACTORS IN THE 10-K/10-Q

BTC drawdowns

The company's main asset can fall fast. Strategy's ledger shows net BTC reductions in four weekly reports between Jun 30 and Aug 10, 2026.[8]

Dilution

New MSTR or ASST shares split ownership further. It only helps holders if BTC per share still rises.

mNAV compression

If the premium to Bitcoin NAV shrinks, selling stock buys less bitcoin per share and the stock can lag BTC.

Dividend obligations

Preferred dividends and interest must be paid in dollars, whatever BTC does. Senior claims rank ahead of common.[3]
