

The Bitcoin Treasury Cheat Sheet

DATA AS OF OCT 4, 2026

How Strategy (MSTR) and Strive (ASST) turn capital into bitcoin, plus the preferreds, metrics and filings to watch.

STRATEGY BTC HELD

847,666as of Sep 27, 2026¹

STRATEGY AVG COST

\$75,437 /BTC\$63.95B total, incl. fees¹

STRIVE BTC HELD

27,462as of Sep 25, 2026⁴

STRATEGY USD RESERVE

\$5.02Bfor dividends & interest, Sep 27¹

1 How Strategy raises money to buy bitcoin

THE FLYWHEEL

1 · RAISE CAPITAL

2 · CONVERT TO BTC

3 · HOLD

Common equity (ATM)

New MSTR shares sold into the market
Dilutes holders; adds no fixed payments

Convertible notes

Debt that can convert into MSTR
≈\$6.75B principal, Jun 30, 2026³

Perpetual preferred stock

STRF · STRC · STRK · STRD
+ STRE (euro). Pays dividends, no maturity

Preferreds and notes create claims that
rank ahead of MSTR common stock.³

STRATEGY

Cash proceeds, net of fees
buys bitcoin on the market

USD RESERVE

\$5.02BSep 27, 2026¹

BITCOIN RESERVE

847,666 BTC

Bought for \$63.95B · avg \$75,437/BTC
incl. fees · as of Sep 27, 2026¹
Goal: grow BTC per share over time

Pays the fixed obligations

Preferred dividends + interest on debt
Q2 2026 cash preferred dividends: \$400.2M³

Real week, from the Sep 28, 2026 8-K: Strategy sold 1,469,165 MSTR shares through its ATM for **\$246.2M** net. **\$142.7M** bought 1,665 BTC (avg \$85,681) and **\$103.5M** went to repurchasing STRC. No preferreds were sold that week.¹

2 The preferreds at a glance

STATED TERMS · NOT YIELDS

TICKER	ISSUER	STATED RATE*	PAYS	LIQ. PREF.	CUMUL.	KEY FEATURE
STRF Strife	Strategy	10.00% Fixed	Quarterly	\$100 stated [†]	Yes	Most senior Strategy preferred; cash dividends; board rights if unpaid.
STRC Stretch	Strategy	12.00% CHECK CURRENT RATE Variable	Semi-monthly (daily proposed)	\$100 stated [†]	Yes	Rate reset by Strategy; aims for trading near \$100. Redeemable at \$101.
STRK Strike	Strategy	8.00% Fixed	Quarterly	\$100 initial [†]	Yes	Converts to 0.1 MSTR share; dividend in cash, MSTR stock, or both.
STRD Stride	Strategy	10.00% Fixed	Quarterly	\$100 stated [†]	No	Non-cumulative: a skipped dividend is never owed. Most junior preferred.
SATA Strive pref.	Strive	13.00% CHECK CURRENT RATE Variable	Monthly rate; Oct 2026 paid each business day	\$100 stated [†]	Yes	Strive targets \$99-\$101 trading; unpaid dividends compound monthly.

* Annual rate on the \$100 stated amount, not the yield at today's market price. STRC 12.00% applies to semi-monthly periods starting on/after Oct 16, 2026 (8-K filed Oct 1, 2026)²; a stockholder vote on daily record dates is set for Oct 28, 2026. SATA 13.00% applies to Oct 1-31, 2026, paid at \$0.0516 per business day (8-K filed Sep 15, 2026)⁵. STRF/STRK/STRD: Strategy 10-Q, Jun 30, 2026³; SATA terms: Strive 10-Q⁶. Also: **STRE** (Stream), a 10% euro-denominated preferred on the Luxembourg Stock Exchange. † Liquidation preference generally the greater of \$100 (€100 for STRE) or a recent trading price. STRK has no stated amount; its liquidation preference started at \$100.

STRIVE (ASST) · SEP 25, 2026⁴

27,462 BTC · **100,776,795** assumed fully diluted shares ·
12,193,180 SATA shares outstanding · also holds **505,000** shares of
Strategy's STRC

RULE OF THUMB

Common stock sales add **shares**. Preferred and note sales add **fixed obligations**. Bitcoin bought with either is only a win for common holders if **BTC per share** rises.

3 Key metrics in one line each

STRATEGY'S OWN KPIS · NOT GAAP

BTC per share

How much bitcoin backs each share, counting likely future shares.

$$\text{BTC held} \div \text{assumed diluted shares}$$

$$847,666 \div 451.577\text{M} \approx 0.00188 \text{ BTC}$$

Sats per share

Same idea in satoshis. 1 BTC = 100,000,000 sats.

$$\text{BTC per share} \times 100,000,000$$

$$\approx 187,713 \text{ sats per share (derived)}$$

BTC Yield

% change in BTC per share over a period. It can be negative.

$$(\text{BPS end} \div \text{BPS start}) - 1$$

$$\text{YTD at Sep 28, 2026 report: (3.7\%)}$$

BTC Gain

BTC Yield restated as a number of bitcoin.

$$\text{BTC held at start} \times \text{BTC Yield}$$

$$\text{YTD: (25,085) BTC, per the ledger}$$

mNAV

What the market pays for the company relative to its bitcoin.

$$\text{Enterprise value} \div \text{Bitcoin NAV}$$

$$\text{EV} = \text{common mkt cap} + \text{debt} + \text{pref. notional} - \text{cash}$$

Bitcoin NAV

The dollar value of the bitcoin pile. Ignores debt and preferreds.

$$\text{BTC held} \times \text{BTC price}$$

$$>1 \times \text{mNAV} = \text{premium} \cdot <1 \times = \text{discount}$$

Worked examples use Strategy's 847,666 BTC and 451,577,000 assumed diluted shares from the ledger row reported Sep 28, 2026^{1,8}. Definitions per Strategy's 10-Q³ and press materials⁷. Strive reports "Assumed Fully Diluted Shares" on its own basis⁴; don't compare the two without reading both definitions.

4 How to read a Strategy 8-K purchase announcement

REAL EXAMPLE · SEP 28, 2026

FORM 8-K · Strategy Inc · filed Sep 28, 2026

Item 8.01 Other Events.

ATM Update Sep 21 – Sep 27, 2026

SECURITY	SHARES SOLD	NET PROCEEDS	AVAILABLE
Preferreds	–	–	–
MSTR	1,469,165	\$246.2M	\$18,844.4M

BTC Update

BTC BOUGHT	PRICE PAID	AVG PRICE	TOTAL BTC	AVG COST
1,665	\$142.7M	\$85,681	847,666	\$75,437

Repurchase Program Updates

STRC 1,534,530 shares \$151.7M

USD Reserve and USD Cash Updates

USD Reserve \$5.02B · USD Cash \$1.00B

Footnotes

(1) purchases funded by MSTR sales · (2) prices inclusive of fees and expenses

1. **Period.** The week covered. Weekly updates have recently been filed on Monday (Tuesday after a holiday).
2. **ATM table.** What was sold and the net cash raised. Common sales dilute; preferred sales add dividend obligations.
3. **BTC update.** Bitcoin bought that week, the price paid, and the new running total and average cost.
4. **Repurchases.** Buybacks of MSTR or preferreds. Money spent here did not buy bitcoin.
5. **Reserves.** USD Reserve (for dividends and interest) and USD Cash balances.
6. **Footnotes.** Where the money came from and how prices are measured. Read these every time.

The quick check: new total BTC – last week's total = BTC bought (or sold). Then ask: was it funded by common (dilution) or preferreds (new dividends)? Compare the average price paid with the running average cost.

5 Key risks

READ THE RISK FACTORS IN THE 10-K/10-Q

BTC drawdowns

The company's main asset can fall fast. Strategy's ledger shows net BTC reductions in four weekly reports between Jun 30 and Aug 10, 2026.⁸

Dilution

New MSTR or ASST shares split ownership further. It only helps holders if BTC per share still rises.

mNAV compression

If the premium to Bitcoin NAV shrinks, selling stock buys less bitcoin per share and the stock can lag BTC.

Dividend obligations

Preferred dividends and interest must be paid in dollars, whatever BTC does. Senior claims rank ahead of common.³
