

Bitcoin Treasury Glossary

27 terms in plain English, for reading filings, dashboards and the show.

8-K A short SEC filing a company uses to report news between its quarterly reports. Strategy and Strive use them for weekly bitcoin and capital updates.

10-Q / 10-K The quarterly (10-Q) and annual (10-K) reports filed with the SEC. Full financials, security terms and risk factors live here.

Assumed diluted shares Shares outstanding plus every share that could appear from convertibles, options and stock awards. Strategy calls it ADSO.

ATM offering "At-the-market" program: the company sells new shares into the market a little at a time, at the going price.

Average cost Total dollars spent on bitcoin (including fees) divided by bitcoin bought. A cost basis, not a value.

Bitcoin NAV Bitcoin held $\times$ the bitcoin price. It ignores debt and preferred stock, so it is not a true net asset value.

Bitcoin treasury company A public company that holds bitcoin as a main reserve asset and raises capital to buy more.

BTC per share Bitcoin held divided by assumed diluted shares. Often shown in sats per share.

BTC Yield Strategy's name for the % change in BTC per share over a period. Not an interest payment, and it can be negative.

BTC Gain BTC Yield turned into a number of bitcoin: starting holdings $\times$ BTC Yield.

Capital stack The pecking order of claims on a company: debt first, then preferred stock, then common stock last.

Convertible note A loan to the company that the lender can swap for common shares, usually above today's price.

Cumulative dividend If a payment is skipped it still builds up and must be paid before common holders get anything.

Dilution Your share of the company shrinks when new shares are issued. It matters whether bitcoin per share still grows.

EDGAR The SEC's free public database of company filings. The primary source for any number in this guide.

Enterprise value (EV) Common stock market value + debt + preferred notional – cash. Strategy uses its own version for mNAV.

Halving Every 210,000 blocks (about four years), the new bitcoin paid to miners per block is cut in half.

Liquidation preference What a preferred holder is owed, per share, ahead of common holders if the company winds up.

mNAV Enterprise value $\div$ Bitcoin NAV. Above $1\times$ the market pays a premium to the bitcoin; below $1\times$ a discount.

Non-cumulative A skipped dividend is simply gone and never has to be made up. STRD works this way.

Perpetual preferred Preferred stock with no maturity date. It can pay dividends indefinitely and is never automatically repaid.

Return of capital (ROC) A distribution treated for tax purposes as giving back part of your investment, which lowers your cost basis. Ask a tax pro.

Sats (satoshis) The smallest unit of bitcoin. 100,000,000 sats = 1 BTC.

SOFR Secured Overnight Financing Rate, a benchmark U.S. short-term rate. It sets a floor in the rate rules for STRC and SATA.

Stated amount / par The reference value per preferred share (often \$100) that the dividend rate is applied to.

USD Reserve Cash Strategy sets aside to help pay preferred dividends and interest on its debt.

Variable-rate preferred A preferred whose dividend rate the issuer can reset (within limits) to keep the price near \$100. STRC and SATA.

Our own plain-English definitions. Company-specific terms (BTC Yield, BTC Gain, mNAV, ADSO, Bitcoin NAV) follow Strategy's definitions in its 10-Q for the quarter ended Jun 30, 2026 and press materials on sec.gov. Halving interval per Bitcoin Core source code.
