How to read it. mNAV = what the market values the company at versus its bitcoin; above 1x the market pays a premium. BTC per share is shown only where the company publishes it (strategy.com, Oct 11, 2026; Strive 8-K, Sep 25, 2026, holdings ÷ assumed fully diluted shares). Miners and operating companies hold BTC alongside other businesses, so mNAV is left blank for them. **Sources:** holdings from company filings via BitcoinTreasuries.NET (2026-10-11); mNAV: Strategy from strategy.com, others from BitcoinTreasuries.NET (methods differ); last buy = latest reported addition; preferreds from issuer filings.
